Science Olympiad Anatomy Practice Test

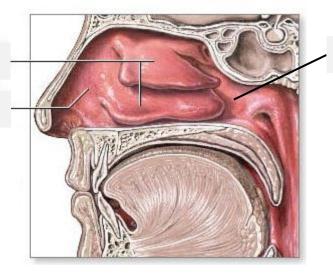

RESPIRATORY SYSTEM – Answers may be found in 2011 Training Handout. Based on the 2010-2011 rules.

School:		Total Score:				
Team Number:		Denominator:	50			
Part I: Respiratory Sys	tem					
Section A. Fill in the bl	lanks.					
1. The respiratory system provides and removes from the blood stream.						
2. Sound is produced w	hen expired air passes o	ver the	·			
3. The respiratory syste	m controls the pH of	·				
Section B. Fill in the bl	anks with the correct let	ter.				
A. Pulmonary ventilation C. Transport of respirat		External respiration Internal respiration				
4. is the move	ment of air into the lung	s and movement of air ou	t of the lungs.			
is the move blood to the lungs.	ment of oxygen from the	e lungs to the blood and ca	arbon dioxide from the			
6. is the transprom the tissues to the l		lungs to the tissue and trai	nsport of carbon dioxide			
7 is the move dioxide from the tissue		ood to the tissue cells and	movement of carbon			
Section C. The Nose.						
8. What are nasal conch	nae?					
9. What are vibrissae?						
C. Transport of respirat 4 is the move 5 is the move blood to the lungs. 6 is the transprom the tissues to the land is the move dioxide from the tissue Section C. The Nose. 8. What are nasal conchessions are simple to the land is the move dioxide from the tissue	ment of air into the lung ment of oxygen from the port of oxygen from the lungs. ment of oxygen from ble cells to blood.	Internal respiration s and movement of air out e lungs to the blood and call	arbon dioxide from the			

10. What function(s) do capillaries have in the nose?

11. What function(s) does mucus have in the respiratory system?

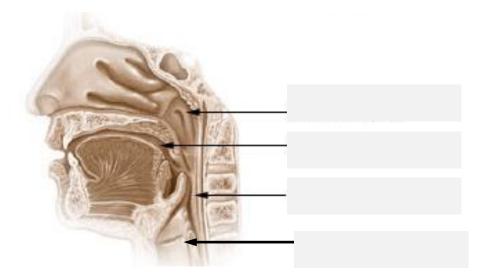

12. Label each part of the nose.

Section D. Pharynx/Larynx

13. What is the pharynx?

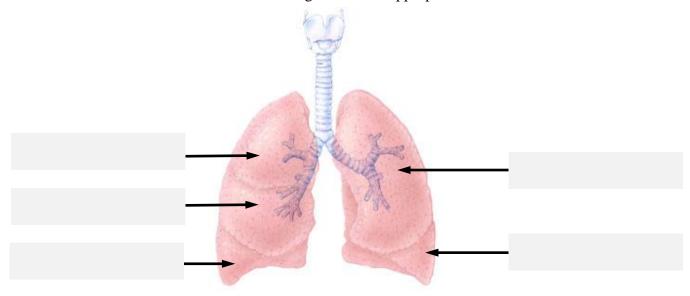

14. Label the three regions of the pharynx. Label the larynx.

15. Name the three functions of the larynx.	
16. What forms the framework of the larynx?	
17. What prevents food and drink from entering the airway when swallowed?	
18. What are the true vocal cords and the false vocal cords?	
Section E. Trachea/Bronchi/Lungs	
19. What reinforces the trachea and keeps it from collapsing when you inhale?	
20. What is the function of ciliated pseudostratified epithelium in the trachea?	
21. What is the name for the two bronchi that branch off from the trachea?	
22. What do the secondary bronchi branch off to?	
23. What are alveolar sacs?	
24. What is the function of elastic connective tissue fibers?	

25.	Why	is	the	left	lung	smaller	than	the	right	lung?

Section F. Label each of the lobes of both lungs with their appropriate names.

Section G. Match each pattern of breathing (letters) to its description (numbers).

A. ApneaD. HyperpneaG. Orthopnea	B. DyspneaE. HyperventilationH. Respiratory Arrest	C. EupneaF. HypoventilationI. Tachypnea
26. Accelerated respiration:		
27. Labored, gasping breathin	ng; shortness of breath:	
28. Normal, relaxed, quiet bro	eathing:	
29. Dyspnea that occurs when	n a person is lying down:	
30. Permanent cessation of br	reathing:	
31. Reduced pulmonary venti	ilation:	
32. Temporary cessation of b	reathing:	
33. Increased pulmonary vent	tilation in excess of metabolic	demand:
34. Increased rate and depth of	of breathing in response to exe	ercise, pain, or other conditions:

Section H. Measures and Capacities of Pulmonary Ventilation

-	a tidal volume of 500 ml, an expiratory reverse volume of 1000 ml, and an volume of 3100 ml, what is this person's vital capacity?
36. If a person has residual volume?	a total lung capacity of 6000 ml and a vital capacity of 4800 ml, what is their
37. Does the inspiration from resting to great	atory reverse volume increase or decrease when a person's breathing changes atter activity?
38. If a person has is their functional r	a total lung capacity of 6000 ml and an inspiratory capacity of 3700 ml, what esidual capacity?
Section J. Match e	ach disorder/disease (letters) to the correct description (numbers).
A. HypoxiaD. EmphysemaG. Lung CancerK. Pneumonia	 B. Oxygen Toxicity E. Asthma H. Acute Rhinitis L. Sleep apnea C. Chronic Obstructive Pulmonary Diseases F. Chronic bronchitis J. Laryngitis M. Tuberculosis
39. Excess oxygen	causing the buildup of peroxides and free radicals:
	bilized and reduced in number, goblet cells increase their production of clogs the airways and breeds infection:
41. Cancer of the lu	ings:
42. Imflammation of	of the vocal folds:
43. The common co	old:
44. Alveolar walls	break down and the surface area of the lungs is reduced:
45. Allergens trigge intense bronchocon	er the release of histamine and other inflammatory chemicals that cause astriction:
46. Cessation of bro	eathing for 10 seconds or longer during sleep:

47. Pulmonary infection with Mycobacterium tuberculosis; reduces lung compliance:	
48. Deficiency of oxygen in a tissue or the inability to use oxygen:	
49. Long-term obstruction of airflow and a substantial reduction in pulmonary ventilation	n:
50. Lower respiratory infection that causes fluid buildup in the lungs:
